To determine which author names should be grouped together under a single identifier number, the Scopus Author Identifier uses an algorithm that matches author names based on their affiliation, address, subject area, source title, dates of publication, citations, and co-authors. Documents with insufficient data may not be matched, this can lead to more than one entry in the results list for the same author. By default, only details pages matched to more than one document in Scopus are shown in search results. [About Scopus Author Identifier](#)

Search history

Continue

1 TITLE-ABS-KEY (heart attack)

Para agrupar os dados de um autor no Scopus sob um mesmo perfil, com um único número de identificação, a base utiliza algoritmos que combinam suas variações de nomes, baseados na sua afiliação, localização, tema, título de origem, data de publicação, citações e coautores.

De forma predeterminada, o perfil do autor está disponível somente quando este tem mais de um documento indexado na base.
